PROJECTS

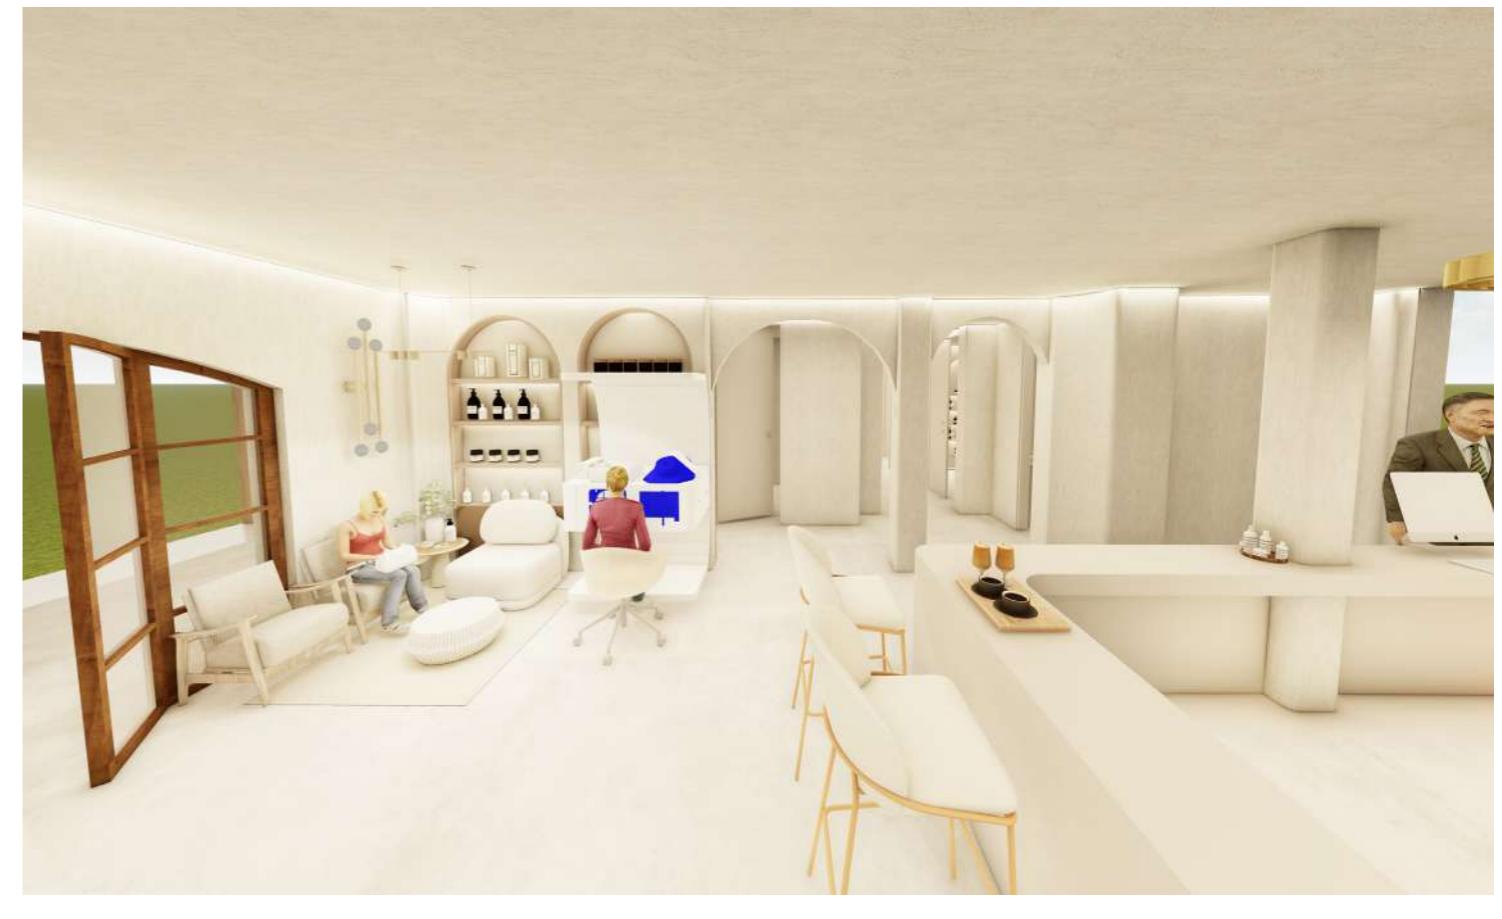

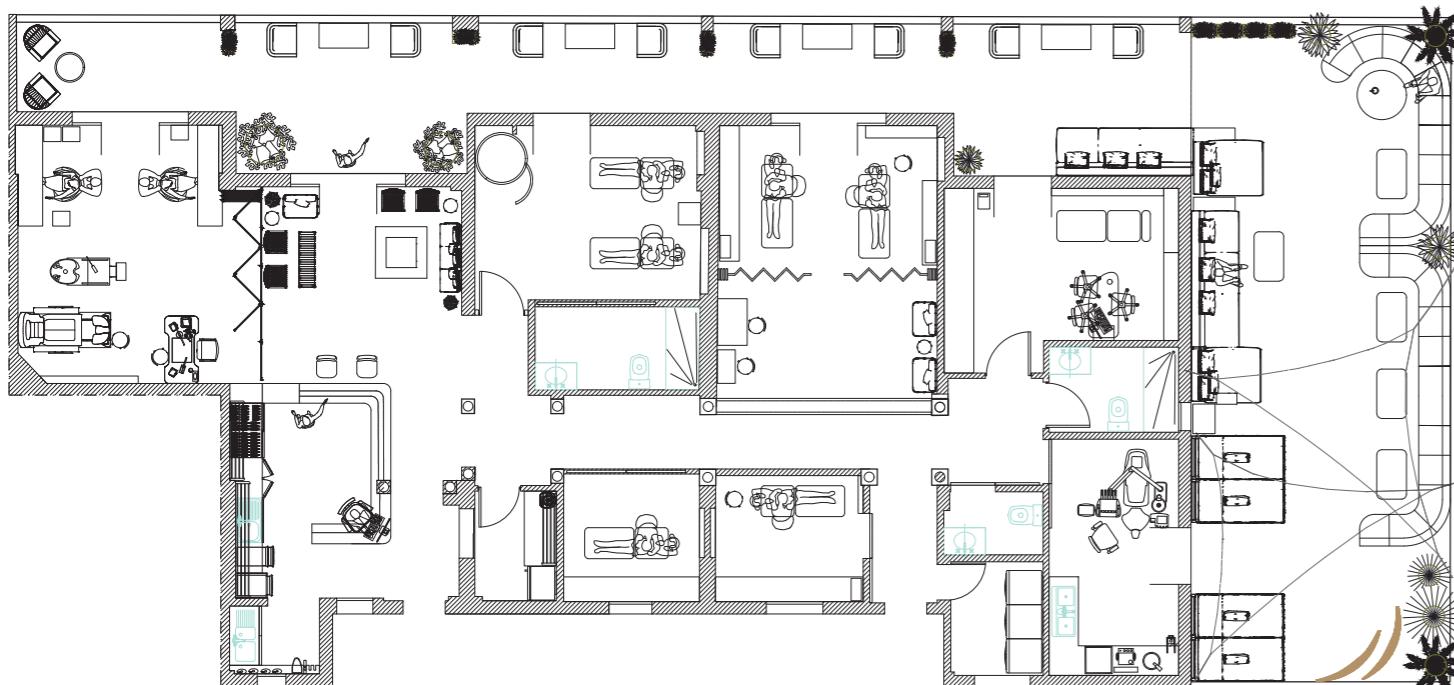

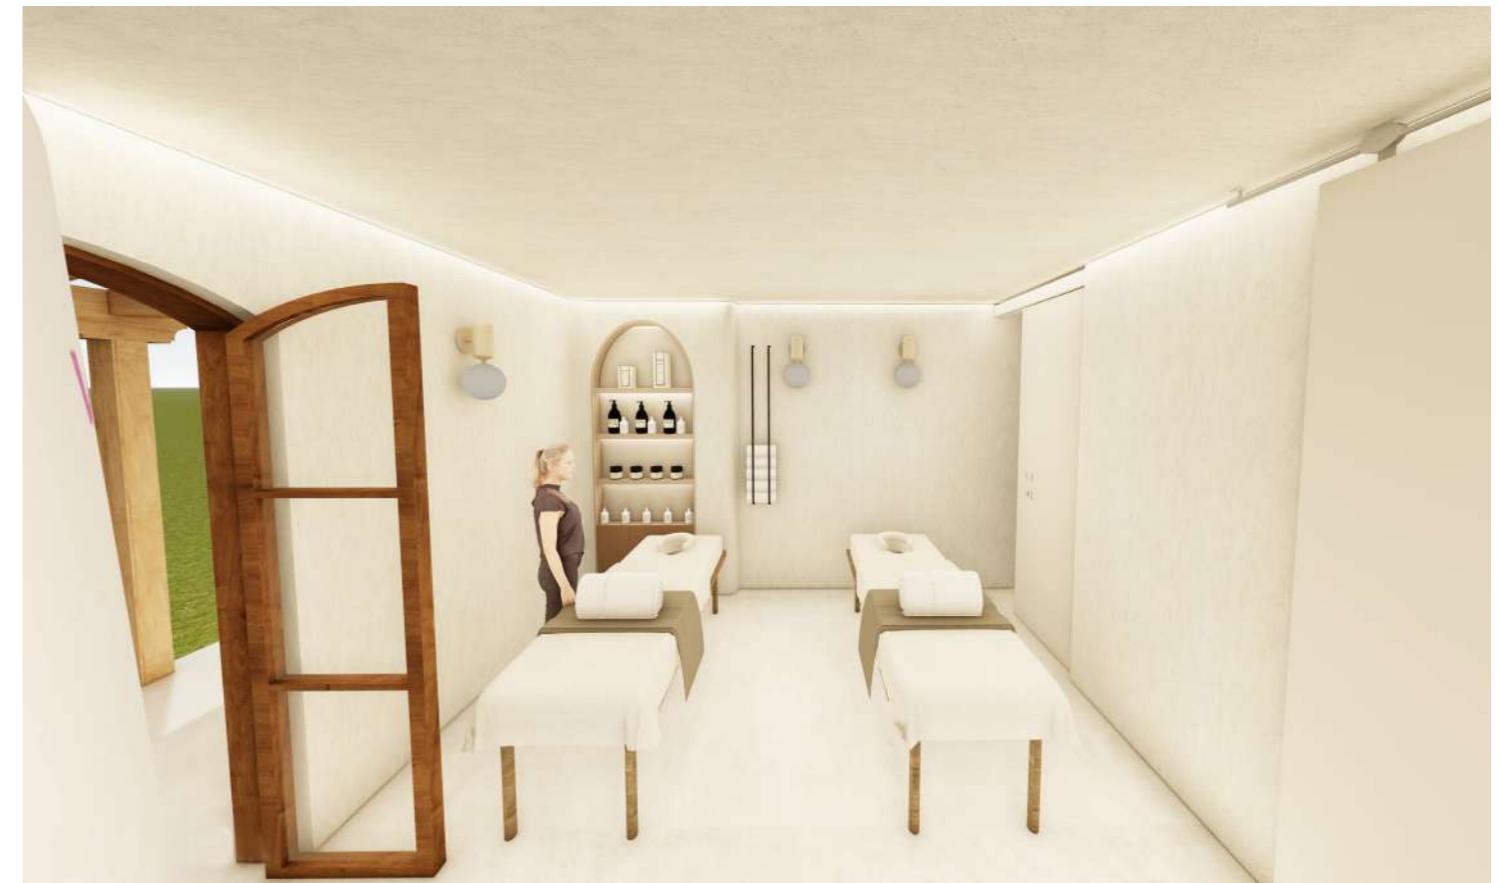

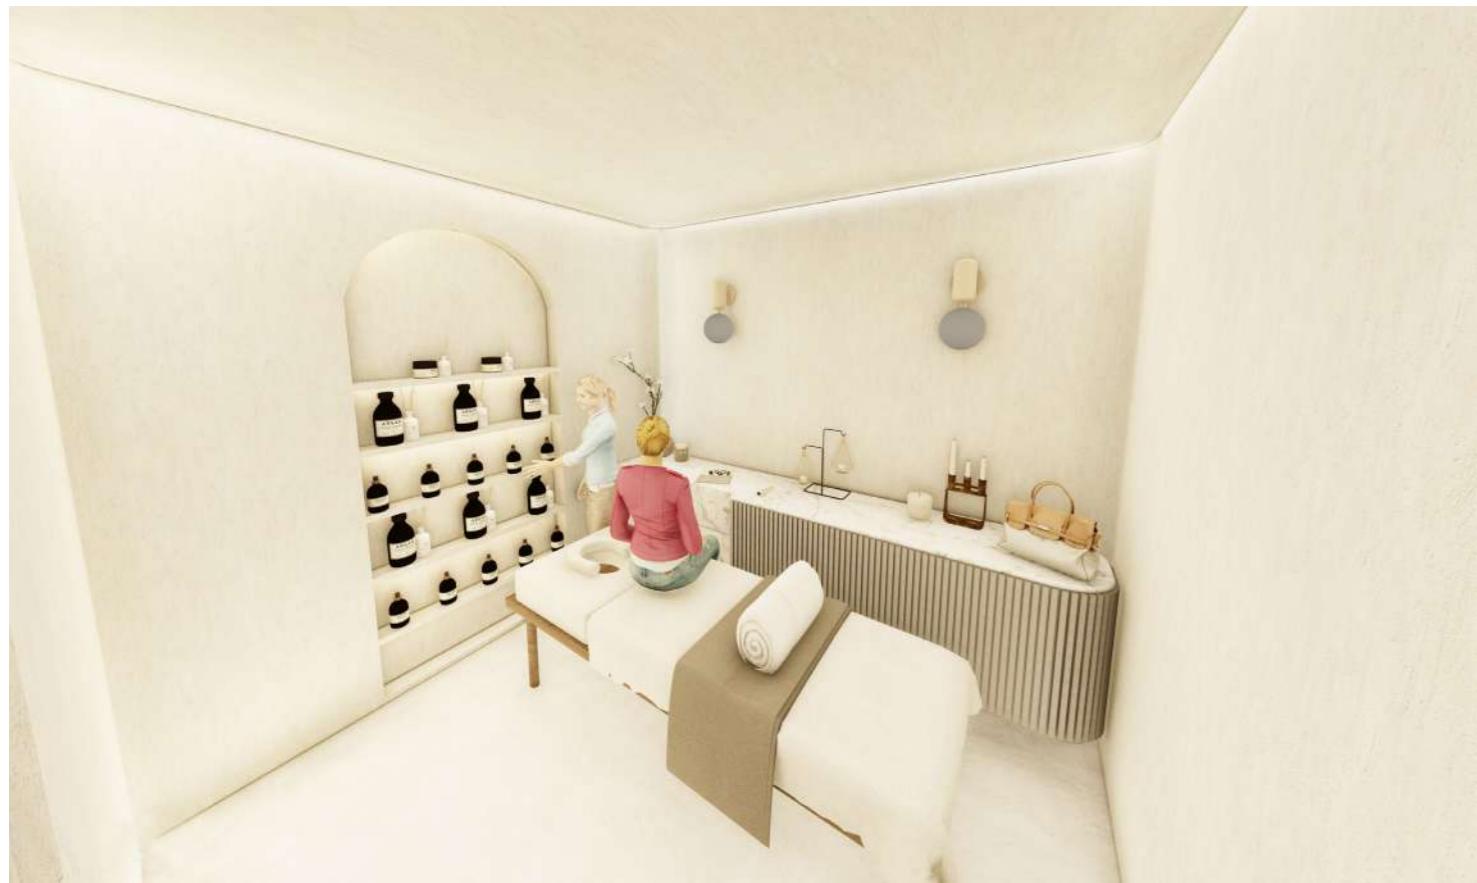

BEAUTY

&

HEALTH CENTER IN PORTALS

This is the design of a beauty and health center located in Puerto Portals, Mallorca. The program of needs of this includes on the one hand a reception area, a small waiting area, a bar with a bar to give drinks to customers waiting to be served, a beauty and aesthetics area with hairdresser, makeup and manicure area, massage area, various treatment rooms, on the other hand we have a medical office, a dental office, a small laboratory, plus toilets for customers and a cleaning area to keep the site in perfect sanitary conditions. The color palette is relaxed and neutral, and there is not a single straight edge in the entire design, all this in order to transmit tranquility and relaxation to visitors.

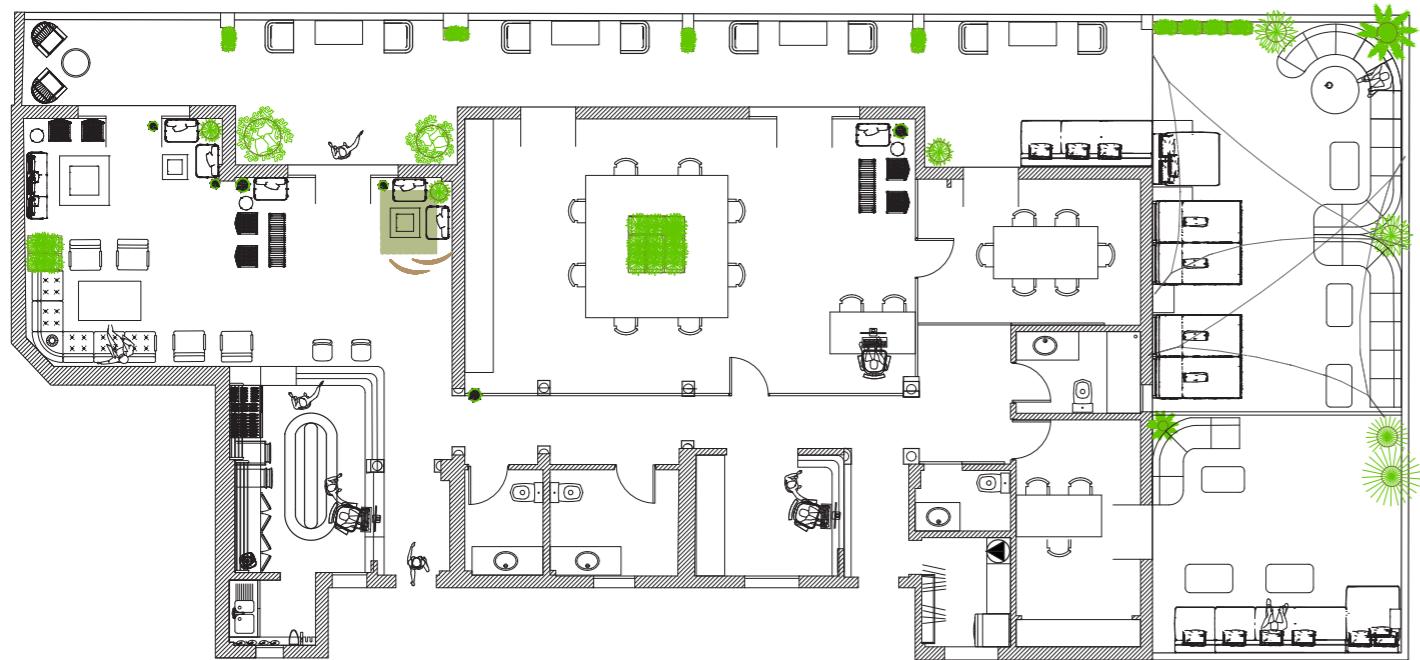

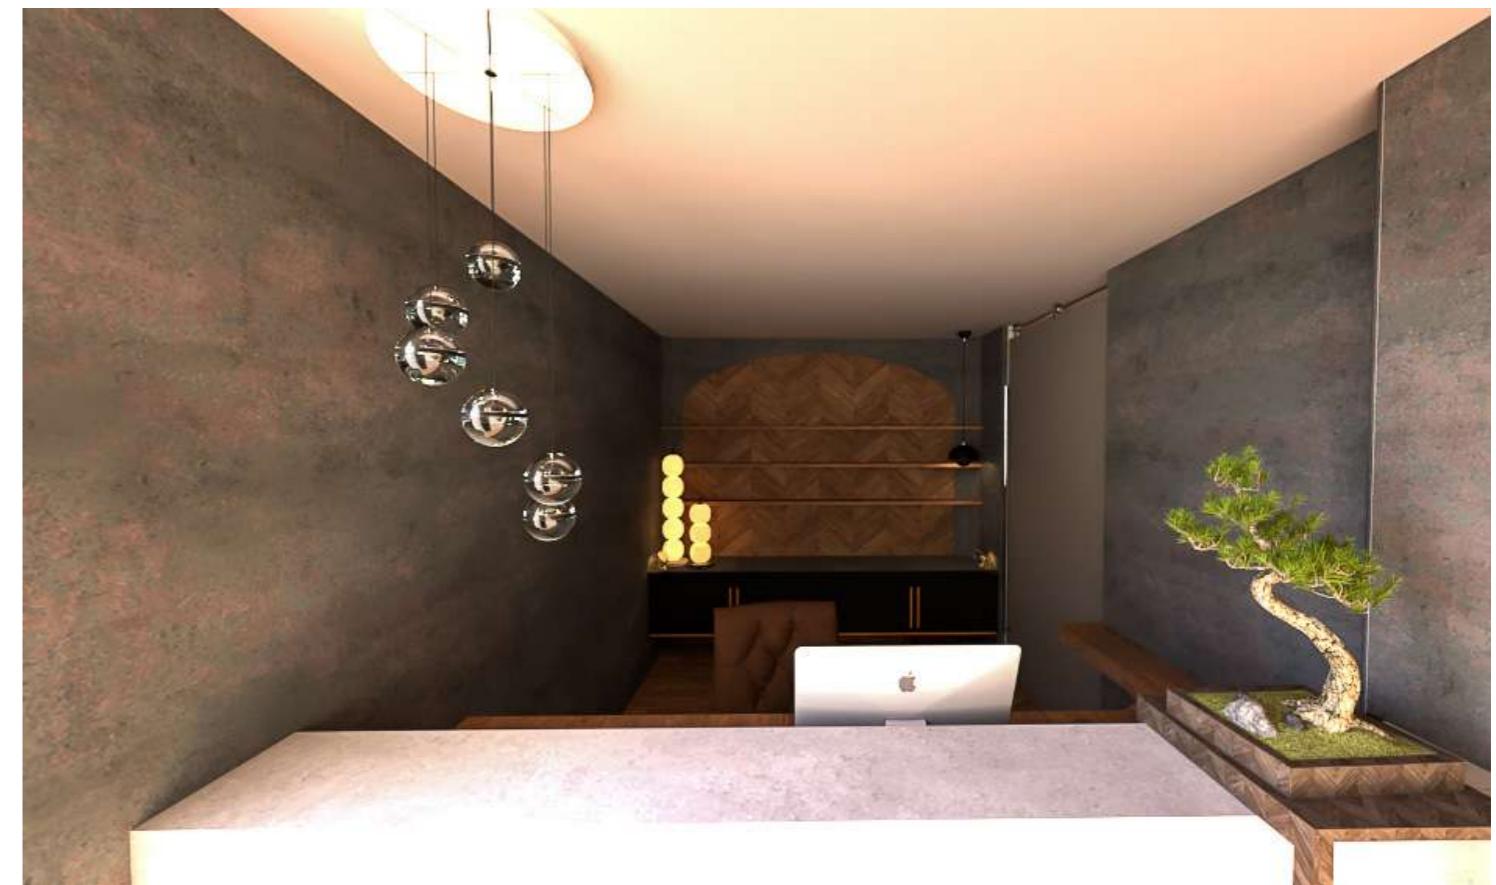

PRIVATE COWORKING OFFICE

WORK
&
OFFICE SPACES

This is the design of a coworking private office located in Puerto Portals, Mallorca. The program of needs of this includes a reception to attend clients and collaborators, a huge area destined to work and share knowledge, a meeting room, a private dispatch on one hand. On the other hand a whole bar area to have a drink and relax while talking with invited or colleagues, also cleaning areas, closet and both zones are provided with toilets for each use.

In this case, the color palette and the selection of the material's finishes is a mixture between classic and contemporary style, that provides solidity and sureness. It betts for a strong aesthetic, defined with moldures, the use of marble, wood and mainly dark tones to bring sophistication.

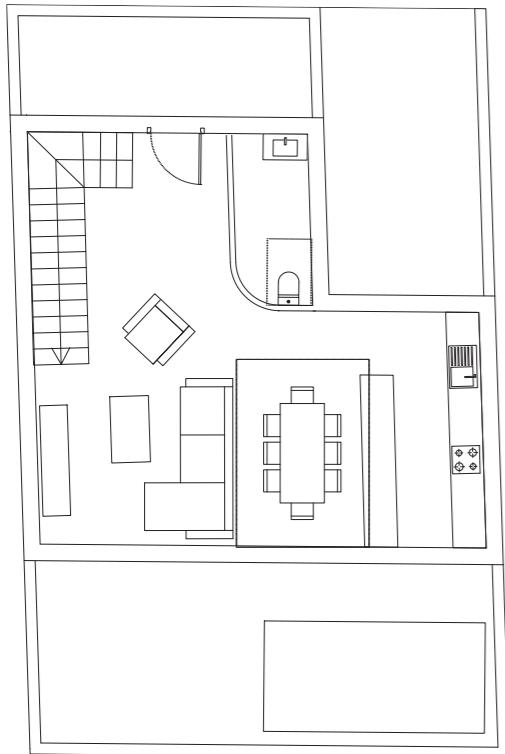

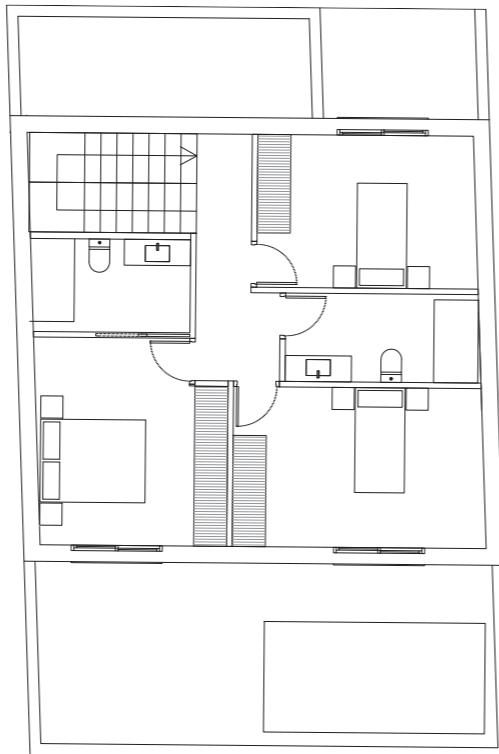

The following projects are all residential designs, whose morphology and aesthetics have been developed according to the needs and tastes of each of the requesting clients. Despite being executed in different ways according to their different requirements, all the houses have a functional distribution that also seeks to provide an aesthetic value that is attractive regardless of the difference in styles.

CASA RAMON, GRANADA

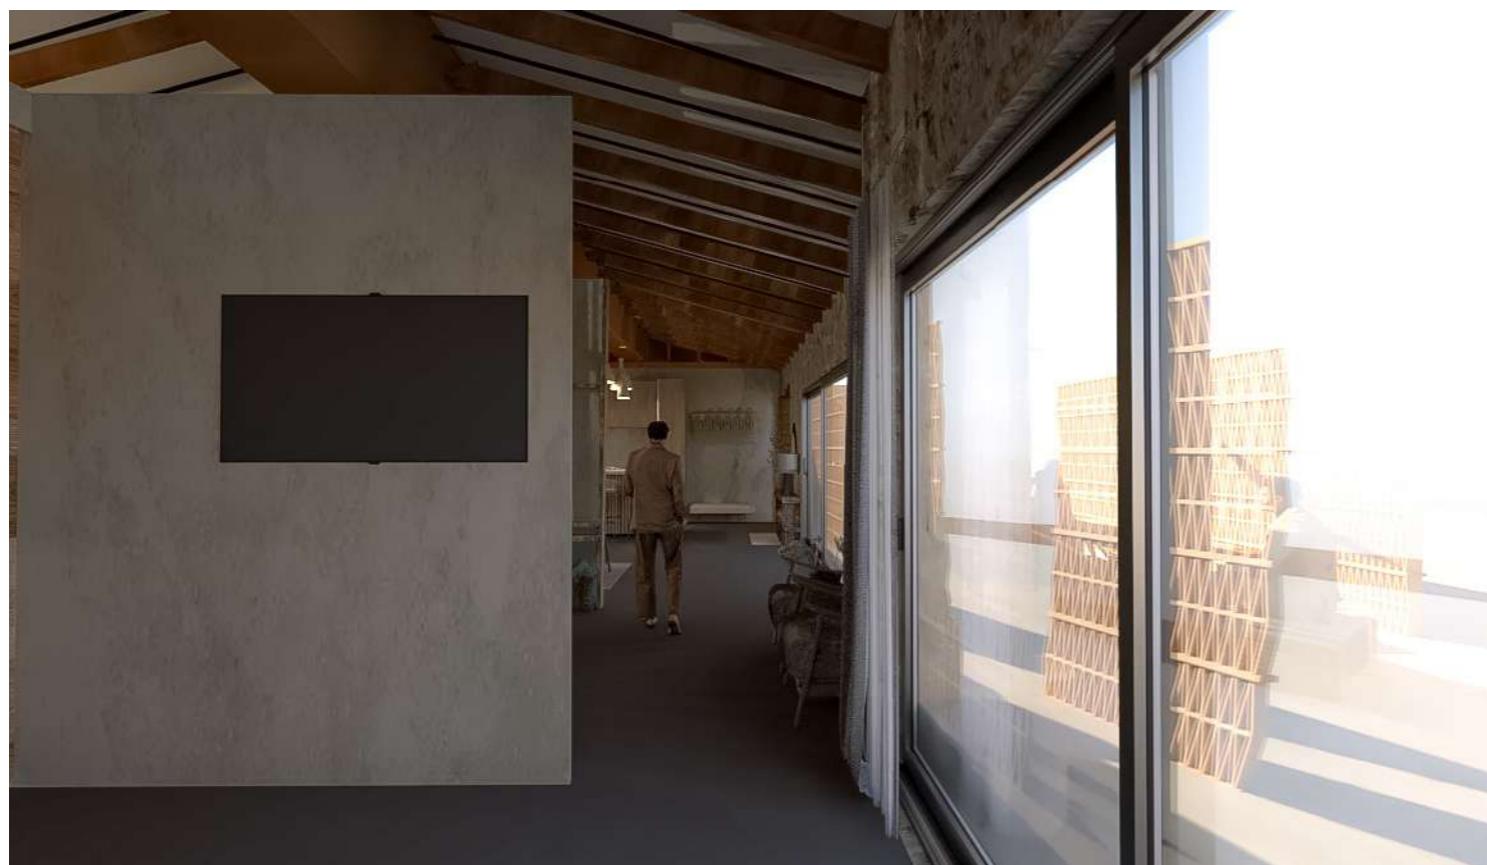

This project consists of the rehabilitation of a country house located in Son Ferriol, Mallorca. With a plot of 30,000 m², this possession has a main building in which it is planned to modify its use and convert it into an agrotourism, with several common areas and spaces for guests to live a complete rural experience. It also has a restaurant at the back of the main house, a swimming pool area and a surrounding area dedicated to the cultivation of the land, whose products are produced in the restaurant and agrotourism.

Other of the current buildings on the property are the old livestock stables, in this particular case we present the rehabilitation of the old cowshed, which has been divided into two apartments for families who want to enjoy a more homely and private country experience.

GEN

DES

TYPE BAT

In this section we present several standard designs of bathrooms on the same generic format in which we follow different aesthetics applying different coatings and materials. The different types of bathrooms proposed have been made according to the latest design trends. This previous work serves to speed up the decision making process of the clients and to get it right from the very first moment in the decision making process and the design project of the bathrooms they want.
